Who should do the course?

Those aspirants who are planning to build their career in RPA Platform

Microsoft Power Automation Course Duration

- 80+ hours of duration
- 30-35 hours live training
- 30-35 hours of recorded video
- 2-3 hours software installation
- 4-5 hours Doubt Classes

→ Microsoft Power Automate Introduction

- What & Why RPA
- What is Microsoft Power Automate
- Why Power Automate
- Job Opportunities with RPA
- Power Automate installation
- The way of working with RPA
- Types of job eligible for RPA automation
- Types of RPA tools
-

→ Get Started with Power Automate for desktop

- Introduction to Power Automate desktop tool
- Take your steps with Power Automate for desktop
- Power Automate actions & all panel introduction
- Overview of different connectors in Power Automate

→ Variable

- What is variable in Power Automate?
- Different types of Variables
- Manipulation of variables

→ Personal Automation using Power Automate Desktop

- Learn to record steps and actions on the desktop
- Learn to work with files stored in local folder
- Learn to extract data from Websites
- Learn concepts of Robotic Process Automation in Microsoft environment.

→ Selectors using Power Automate

- Selector Introduction
- Importance of selector
- How to edit selectors
- How to pass wildcards in Selector
- Use the flow action to automate Web Applications

→ Web Automation using Power Automate

- Web Applications Automation using flow action
- Web application using Power Recorders
- Use the flow action to automate Web Applications

→ Email Automation using Power Automate

- Introduction to Email Automation
- Outlook Automation using Microsoft Power Automate
- How to send email
- How to receive email
- How to download the attachment

→ Database Automation using Power Automate

- Introduction of Database Automation
- How to configure Database with Power Automate
- How to execute query using Power Automate

→ Data Scrapping using Power Automate

- Introduction of Data Scrapping
- How to extract data from different Website
- Example of data scrapping from Amazon & Flipkart.

→ Exception Handling /System and Business Exception

- What is Exception Handling
- What is difference between System & Business Exception
- How to handle the System & business exceptions

→ AI Builder and Process Mining in Power Automate

- Learn to create custom connectors
- Learn to train a pre-built AI template for use
- Learn to build and train your own personal AI bot in Power Automate
- Learn the concept of Process Mining in Power Automate.
